

SUPERIOR SWINE NUTRITION AND HEALTH, **MICROENCAPSULATED.**

As the global swine industry moves away from antibiotics, building robust, healthy herds is essential for every farmer. Maxx microencapsulation technologies deliver alternative compounds for doing just that, while improving overall feed efficiency and promoting growth.

Enhancing **Performance:**

Better nutrient utilization and increased absorptive capacity of the intestinal tissues lead to faster growth rates and healthier pigs.

Decreasing **Piglet Mortality:**

Our solutions help improve piglet survival rates by boosting overall gut function and resilience.

Improving **Gut Health:**

Controlled release of organic acids and essential oils to the lower gut strengthens the intestinal barrier, reduces enteric disease, and shortens recovery times.

Reducing **Antibiotic Use:**

Microencapsulated nutrients support natural gut flora and immunity, decreasing the need for antibiotics.

THE POWER OF **CONTROLLED-RELEASE,** **TARGETED DELIVERY**

At Maxx, we encapsulate active ingredients in a food-grade shell as thin as a human hair, protecting nutrients during feed production and steam pelleting with **94% recovery**, ensuring they're preserved and released precisely when and where they're needed for maximum effectiveness.

BETTER HEALTH FOR YOUR HERD

PRECISION SOLUTIONS FOR SWINE FEED

Maxx Performance offers two powerful microencapsulated additives to help swine producers optimize the overall health and performance of their herd.

MAXXZINC

This free-flowing additive stimulates the growth of beneficial gut microflora, enhancing the overall performance of the herd, including piglets, gilts, and sows. By lowering harmful bacteria levels in the gut, MaxxZinc helps reduce susceptibility to diarrhea and other enteric diseases.

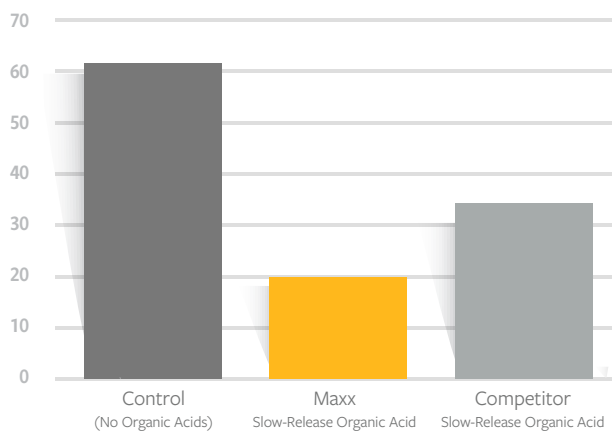

MAXXACID-S

This specially prepared additive contains a microencapsulated blend of organic acids and essential oils for use in pig feed. MaxxAcid-S delivers complete dosages of actives directly into the intestine for improvement of intestinal health and as an alternative to antibiotics.

65% GREATER EFFICIENCY & IMPROVED PIGLET HEALTH

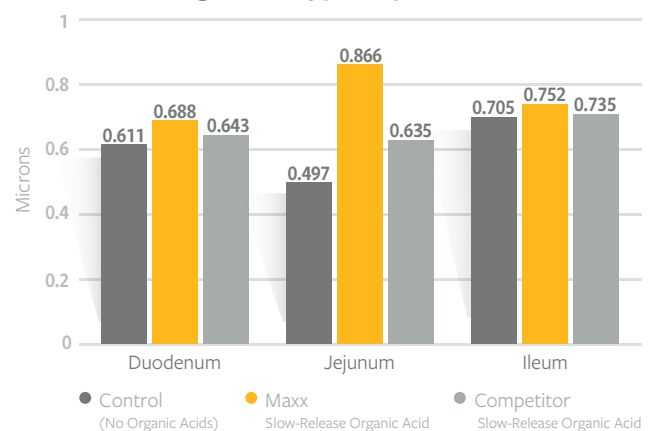

A university study demonstrated the superior efficiency of Maxx's slow-release organic acid and essential oils in promoting piglet health. Administered at just 700g/MT, our product outperformed a competitor's product given at 2kg/MT, as well as delivered powerful health benefits.

Piglets with Diarrhea (Samples of 100)

Reduction in piglet diarrhea, resulting in faster growth rates and less reliance on antibiotics.

Villus Height to Crypt Depth Ratio

Improved villi height in the small intestine and increased volatile fatty acids (VFA), resulting in better nutrient absorption and fewer pathogenic bacteria.
